Congress objectives

The CILBIA1 congress aims mainly to exchange between scientists, farmers and representatives of the concerned organizations; scientific knowledge as well as cumulative experiences in the following fields :

- Bio-ecological knowledge and assessment of damage caused by plant diseases, weeds as well as pests / disease vectors in agrosystems, forests and urban environments (human health)
- Biological control as a means of preserving biodiversity
- Actions for the registration of plant protection products and risk assessment and biosecurity

In addition, CILBIA1 also comprises:

- Identify skills, resource persons and organizations working in the areas of interest of the congress, with a view to setting up an interactive network dedicated to "Development of biological and integrated control in Algeria".
- Consolidate / Reinstate within the Commission "Integrated production, protection and biocontrol for North African countries : International Organization for Biological and Integrated Control OILB", the Algerian "working groupe" dedicated to the promotion of methods of fight against diseases and pests, without harm on the environment and to contribute to the development of biological control.

This group will focus on the strengths / opportunities, the weaknesses / threats as well as the way forward to achieve the objectives and recommendations highlighted by the congress.

- Publish the proceedings of the conference in the OILB bulletin.
